Do you want quality service, but aren't ready to electronically file? Then 2-D BARCODE is the answer! 2-D Barcode provides you with optimal service, fewer errors, and a faster refund.

Missouri is preparing for its fifth year of 2-D Barcode filing. Last year more than 260,000 filers used this alternative filing method.

2-D Barcode filing is simple and can be completed in four easy steps.

1. Buy a vendor approved software package that offers 2-D Barcode.
2. Prepare your return as usual using the 2-D software package. You will see no difference in the return preparation portion.
3. Print out prepared return. The 2-D Barcode will print on the return and contain all the information included in the return.
4. Sign and mail the return to the 2-D Barcode P.O. Box specified in your software package.

When the returns are delivered to the Missouri Department of Revenue, they go directly to scanning stations and bypass data entry. The information contained in the barcode is scanned directly into the processing system. The opportunity for a data entry error by our temporary staff is eliminated. By mailing only 2-D Barcode returns to the specific P.O. Boxes provided, there is no sort time.
